✓ 2. History of Testwell CTC++

1989 Start of CTC++ development by Nokia group

1992 Foundation of Testwell Oy, Tampere (Finland)
with the mission of further development of CTC++

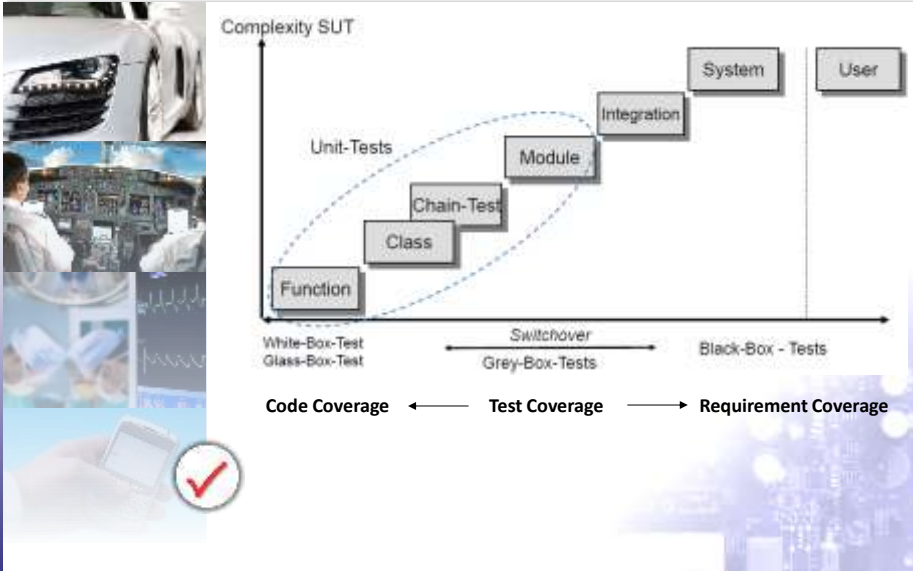

2003 Foundation of Verifysoft Technology GmbH, Offenburg
as distributor for Testwell tools in Europe

2013 Verifysoft purchased Testwell tools

Several hundred CTC++ customers worldwide.
More than 1,000 licenses successfully in use.
Ongoing development.
Qualification-Kit
for DO-178C, IEC 61508, EN 50128, ISO 26262

www.verifysoft.com 4

3. Why Code Coverage?

3. Why Code Coverage?

Cause-Reason-Graph	Static Testing	Back-to-Back Testing
Classification Tree Method (CTM)	Equivalent Classes	CRUD
Realtime Testing	Multidimensional Equivalent Classes	Rare Event Testing
Load Tests	Boundary Value Analysis	Random Testing
Recovery Tests	Critical Value Analysis	Monkeytest
Stress Tests	Informal Tests	Fuzzing (Fuzz Testing)
	Smoke Tests	Evolutionary Testing
	<i>Basis</i>	Pairwise Testing
Control Flow Oriented Testing	Advanced	

Established test technique for critical Embedded Systems
 Test-End criterion (White-Box-Tests)
 Necessary to fulfill requirements of safety standards.

Code Coverage:
 shows the parts of the code which have been
 executed / not executed
 tested / not tested

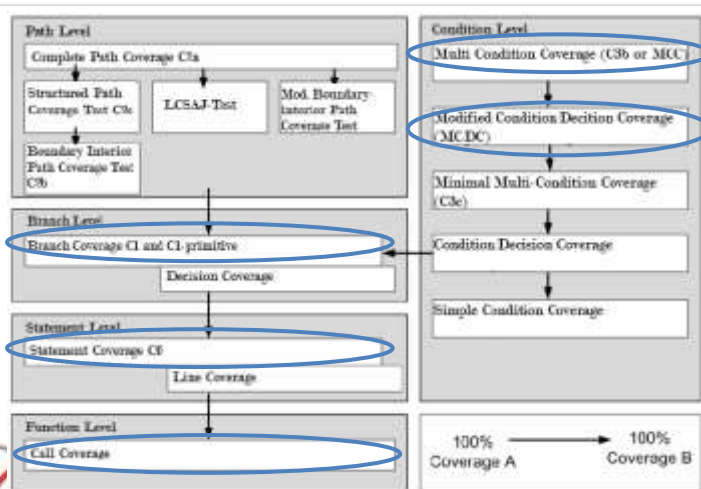

3. Why Code Coverage?

Why measure Code Coverage ?

- Write better (more adapted) tests
- Avoid redundant tests
- Know when you can stop testing
- Prove to your customers you have good quality
- Insure that your development partner delivers good quality
- Find Dead Code
- Required to obtain certifications
- Mandatory for safety critical development (standards DO-178C, IEC 61508, EN 50128, ISO 26262, ...)

4. Safety Standards and Code Coverage

✓ 4. Safety Standards and Code Coverage

DIN EN 61508-3

General Industry

SIL: Safety Integrity Level

Method		SIL 1	SIL 2	SIL 3	SIL 4
...
7a	Function Coverage	++	++	++	++
7b	Statement Coverage	+	++	++	++
7c	Branch Coverage	+	+	++	++
7d	MC/DC	+	+	+	++

Table B.2 from DIN EN 61508-3

- ++ Highly recommended
- + Recommended

✓ 4. Safety Standards and Code Coverage

ISO 26262-6

Automotive

ASIL: Automotive Safety Integrity Level

Methods		ASIL			
		A	B	C	D
1a	Statement coverage	++	++	+	+
1b	Branch coverage	+	++	++	++
1c	MC/DC (Modified Condition/Decision Coverage)	+	+	+	++

Table 12 (Software Unit Level), ISO 26262-6

Methods		ASIL			
		A	B	C	D
1a	Function coverage	+	+	++	++
1b	Call coverage	+	+	++	++

Table 15 (Software Architectural Level), ISO 26262-6

- ++ Highly recommended
- + Recommended

4. Safety Standards and Code Coverage

DO-178B/C

Aerospace

Level	Impact	Coverage Level	% of Systems	% of Software
A	Catastrophic	MC/DC, C1, CO	20-30%	40%
B	Hazardous/Severe	C1, CO	20%	30%
C	Major	CO	25%	20%
D	Minor	-	20%	10%
E	No Effect	-	10%	5%

Statement Coverage C₀, Branch Coverage C₁, Modified Condition/Decision Coverage MC/DC

IEC 62304

Medical Systems

... it might be desirable to use white box methods to more efficiently accomplish certain tests, initiate stress conditions or faults, or increase code coverage of the qualification tests." (IEC 62304, Chapter B.5.7 Software System testing)

Code Coverage Requirements: CENELEC EN 50128

Table A.21 – Test Coverage for Code

Technique / measure	Reference	SIL 0	SIL 1	SIL 2	SIL 3	SIL 4
Statement		R	HR	HR	HR	HR
Use the Coverage module to report Statement Coverage for the executed Unit Tests and/or monitored application runs – on the host, simulator and/or target platform.						
Branch		-	R	R	HR	HR
Use the Coverage module to report Decision/Branch Coverage for the executed Unit Tests and/or monitored application runs – on the host, simulator and/or target platform.						
Compound Condition		-	R	R	HR	HR
Use the Coverage module to report Condition Coverage for the executed Unit Tests and/or monitored application runs – on the host, simulator and/or target platform.						
Path		-	R	R	HR	HR
Use the Coverage module to report Path Coverage for the executed Unit Tests and/or monitored application runs – on the host, simulator and/or target platform.						

5. Different Coverage Levels

Testwell CTC++ supports **all** required **coverage levels**:

- Function Coverage
- Decision Coverage
- Statement Coverage
- Condition Coverage
- Modified Condition/Decision Coverage (MC/DC)
- Multicondition Coverage (MCC)

works together with all unit-test tools

www.verifysoft.com 13

6. Compiler Support

Testwell CTC++ works with **all compilers**
Support is available for (as of March 2014, for actual list refer to www.verifysoft.com/en_compilers.html):

Altium Tasking classic toolsets, VX-toolset toolsets, c166, cc166, ccm16c, cc51
ARM DS-5, Keil MDK-ARM
Borland/Inprise/Paradigm/Codegear bcc, bcc32, pcc, pcc32 (Paradigm)
Ceva DSP all (just use gcc settings)
Cosmic cx6805, cx6808, cx6812, cx512x, cx512z, cxogate, cx6811, cx6816, cx332, cxst10, cxstm8, cxst7, cxcf, cx56k, cxppc
Freescale/Metrowerks mwccmcf, mwccpepp, mwccmcore, mwcc56800, mwcc56800e, chc12, chc08
Fujitsu/Softune fcc907s, fcc911s, fcc896s
gcc and all gcc based cross-compilers i586-mingw32msvc-gcc, x86_64-linux-gnu-gcc, m68k-palmos-coff-gcc, tricore-gcc, arm-linux-gnueabi-gcc, arm-none-eabi-gcc, arm-none-linux-gnueabi-gcc, arm-elf-gcc, arm-montavista-linux-gnueabi-gcc, pic30-gcc, pic32-gcc, avr-gcc, xc16-gcc, mlx16-gcc, thumb-epoc-pe-gcc, arm4-epoc-pe-gcc, armv-epoc-pe-gcc, powerpc-wrs-linux-gnu-e500v2-glibc_small-gcc, *-gcc, *-*-gcc, *-*-*-gcc
GHS/GreenHills/Multi ccv850, cxv850, ccmips, cxmips, ccarm, cxarm, ccthumb, cxthumb, ccppc, cxppc.gcc (GreenHill), not GNU)
Hitachi shc, shcpp, ch38, cxrx
Hi-Tech PICC (Windows and Linux) picc, picc18, picc32, dspicc, xc16-gcc, xc32-gcc,
HP HPUX CC, HP C++, aCC
IAR compilers and toolchains icc430, icc78k, icc78k0r, icc8051, iccarm, iccavr, iccavr32, icccf, icchcs12, iccdspic, iccmxaq, iccpic18, icccr16c, iccv850, icch8, iccm8k, iccm32c, iccm16c, iccr32c, iccr178, iccrx, iccsam8, iccstm8
Intel (all platforms) icc, ic86, ic96
Java compilers Javac, jikes, ecj, gcj, kaffe
Keil c51, c166, c251, ca/ cx51, cx2, tcc / armcc
LLVM clang, clang++ / Matlab/Simulink/ lcc
Metaware (both Windows and Linux host) hcac, hcacr, hcarm
Microchip MPLAB C pic30-gcc, pic32-gcc

www.verifysoft.com 14

6. Compiler Support

Testwell CTC++ works with all compilers (continued)
→

- Microsoft compilers** cl on host, both 32 and 64 bit / cl for Smartphones and PocketPC / csc C# compiler / vjc .J# compiler
- Mono compilers** dmcs, mcs, gmcs, smcs
- Motorola** chc12, chc08
- Pathscale** pathcc/pathCC
- Renesas** shc, shcpp, ch38, ccrx
- Raisonance** rc51, rcmp
- Sun** Workshop compilers, javac
- Symbian** various compilers
- TI Code Composer Studio (Windows)** cl2000, cl16x, cl470, cl55, cl500, cl430
- Texas Instruments Linux compilers** cl2000, cl16x, cl470, cl55, cl500, cl430
- Trimedia** tmcc
- VisualDSP++** ccblkfn, cc21k, ccts
- Windriver** ccarm, ccsmipc, g++simpc, g++arm, cchppa, ccsmiso, ccsparc, cc68k, cc386, cc960, ccmps, ccppc

You have not seen your compiler? Contact us!
We will adapt Testwell CTC++ to your compiler within a few days and without any cost (adaptation can even be done by the customer).

**Testwell CTC++ supports all compilers!
No unsupported compilers!**

www.verifysoft.com 15

7. Code Instrumentation

Instrumentation

- Adding of global counters (Integer-Arrays) into the source code
- Storage of information about counter instrumentation
- Increment counters with each run
- Storage of counter values
- Analysis of the counter values for reporting

www.verifysoft.com 16

7. Code Instrumentation

Tool-Chain

Testcoverage Tool

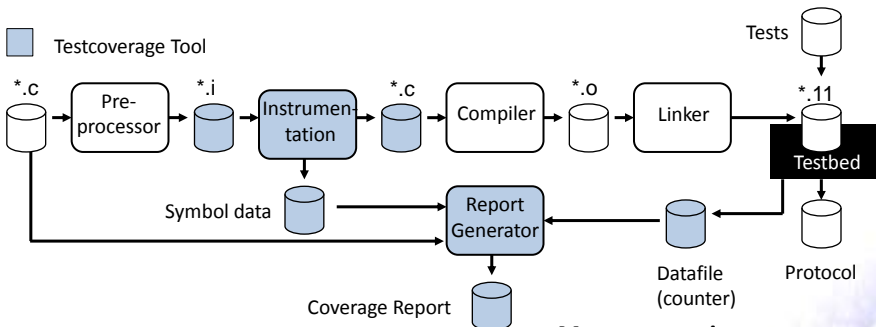

Memory requirement without instrumentation

7. Code Instrumentation

Tool-Chain

Testcoverage Tool

Memory requirement without instrumentation

Memory requirement with instrumentation

7. Code Instrumentation

- **RAM**
 - **ROM**
- } Reason for lack of memory: **80 % RAM, 20 % ROM** (pract. experience)
- Mostly no filesystem (so counters have to be stored in memory)

- Limited amount of interfaces on the target device (transfer of datafile)
Consider additional testing interfaces in the hardware design (design for test)

7. Code Instrumentation

```
int goo( int a, int b, int c)
{
  int x;

  if (((a>0) || (b>0)) && (c>0))
  {
    x = 1;
  }
  else
  {
    x = 0;
  }

  return x;
}
```

ROM-Usage

Without instrumentation: 60 Byte
 Function Coverage: 67 Byte
 Branch Coverage: 118 Byte
 Condition Coverage: 285 Byte

Simple example with small code and big instrumentation overhead (mean 30 % of code size).

Additional RAM-Usage without Bit-Coverage

Function Coverage: 1 Integer
 Branch Coverage: 4 Integer
 Condition Coverage: 7 Integer

Integer: 32 Bit (unsigned long) as default

Additional RAM-Usage using Bit-Coverage

Function Coverage: 1 Bit
 Branch Coverage: 4 Bit
 Condition Coverage: 7 Bit

✓ 8. Support for Embedded Targets and native projects

Testwell CTC++ is **the ideal tool for embedded targets**

- Dramatically easy to use !
- Very low instrumentation overhead on your C files
- Works with **all targets**
 - Host-Target add-on is provided as source code and so can be easily adapted to new targets
- ... even with **smallest targets** and microcontrollers
- Supports all compilers/cross-compilers

✓ 8. Support for Embedded Targets and native projects

Testwell CTC++ is **the ideal tool for native projects**

- Setup and usage are straightforward
- Java and C# support on top of C & C++
- Very fast analysis
- Interfacing with MS Visual Studio IDE
- ...even on **large projects**

9. Testwell CTC++ Packages and Qualification Kit

Host-Target add-on for embedded targets

Bit-Coverage add-on for very small embedded targets

Testwell CTC++ Host

CTC++ for Java and Android add-on

CTC++ for C# add-on

✓ You only need one code coverage tool for C, C++, Java and C#
One license covers all embedded targets and all compilers

9. Testwell CTC++ Packages and Qualification Kit

Compliance with Standards
DO-178C - IEC 61508 - IEC 62304 - ISO 26262

Testwell CTC++ can be used to obtain certification in automotive, railway, avionics and medical industries

Tool-Qualification Kits available

EN 50128 Qualification Kit

DO 178-C Qualification Kit

ISO 26262 Qualification Kit

IEC 61508 Qualification Kit

✓ 11. Supported Platforms/IDE and Tool Integrations

IDE-Integrations

- Visual Studio v7.0 and later
- IAR (all platforms)
- Borland 5.02
- Fujitsu Softune
- Eclipse
- Others on request

Works also with:
MP-LAB, Keil, ...

www.verifysoft.com

33

✓ 11. Supported Platforms/IDE and Tool Integrations

**Integrations
with Tool-Chains and Testing environments
include**

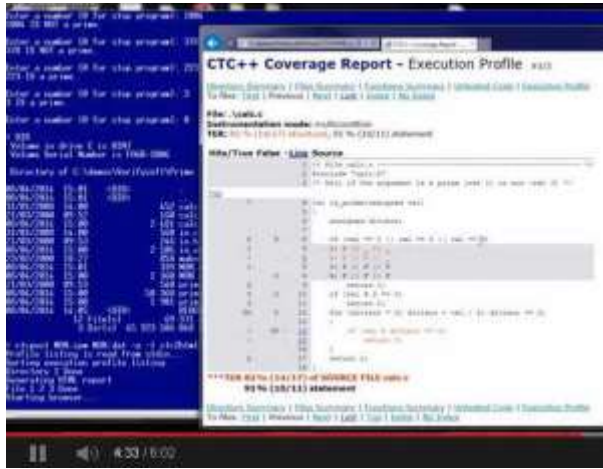

- CATIA - AUTOSAR Builder (Dassault Systèmes)
- dSpace SystemDesk
- dSpace TargetLink
- PikeTech TPT
- QTronic TestWeaver / Silver
- Imagix 4D
- SonarQube
- ... (ask for other integrations)
